Kensington Soars With the FlyLight Notebook Light; New Laptop Computer Accessory Lights Up Keyboards and More!

Business Wire, p0071
Dec 8, 2000

TEXT:

Business Editors/High-Tech Writers

SAN MATEO, Calif.--(BUSINESS WIRE)--Dec. 8, 2000

Business travelers can literally `lighten up' when they fly with an innovative new gadget for laptop computers from Kensington Technology Group. The **FlyLight** (TM) Notebook **USB Light** is a small notebook computer accessory that helps users to work easily in dimly lit places such as airplanes or conference rooms.

The slim FlyLight accessory is lightweight, easy to carry, and tucks neatly into a computer case. This handy device plugs into the USB port of any Mac(R) or PC. The user simply positions the flexible cable to shed a soft, glowing light wherever it's needed.

"Customer research shows that laptop users, especially business travelers, often work in dark places," said Tom Pscheidt, product manager, Kensington Technology Group. "We developed the FlyLight Notebook Light to provide our customers with a flexible, portable solution to work in those darkened areas."

A great gift idea, the FlyLight Notebook **USB Light** can be quickly attached to your computer for use on airplanes when you do not want to disturb other passengers, in darkened conference rooms when delivering a computer-based presentation, or in bed when you don't want to waken your spouse.

The device has a gentle white LED glow that lasts up to 100,000 hours of continuous use. Its innovative Plug-n-Glow(TM) technology works without any software or installation. Powered by the notebook computer battery, the light uses less than 90 seconds of battery charge per hour of use.

The FlyLight Notebook **USB Light** is an ideal gift for busy executives or frequent travelers and is available at major computer retailers and at www.kensington.com for an estimated price of $19.99.

Kensington has a full line of mobility solutions. Products include MicroSaver(R) security cables, Simply Portable(TM) laptop cases, and SmartSockets(R) portable surge protectors.

About Kensington (www.kensington.com)

For more than 19 years, Kensington Technology Group has set the standard in computer accessories. A commitment to understanding the computer user's changing computing environment -- whether at the office, at home, on a plane, or elsewhere -- drives development of a broad line of innovative accessories that enhance comfort and productivity. And Kensington stands behind its more than 300 products -- including trackballs, mice, keyboard drawers, security devices, carrying cases, wrist pads, glare screens, power protection and more -- with impressive warranties (visit www.kensington.com or call toll-free 800/235-6708 for details).

Headquartered in San Mateo, Kensington Technology Group is the technology division of ACCO Brands, Inc.

Note to Editors: MicroSaver, SmartSockets and Kensington are registered trademarks, and FlyLight, Plug-n-Glow, and Simply Portable are trademarks of ACCO World Corp. All other registered and unregistered trademarks are the property of their respective owners.

FlyLight Illuminates Your Laptop Keyboard

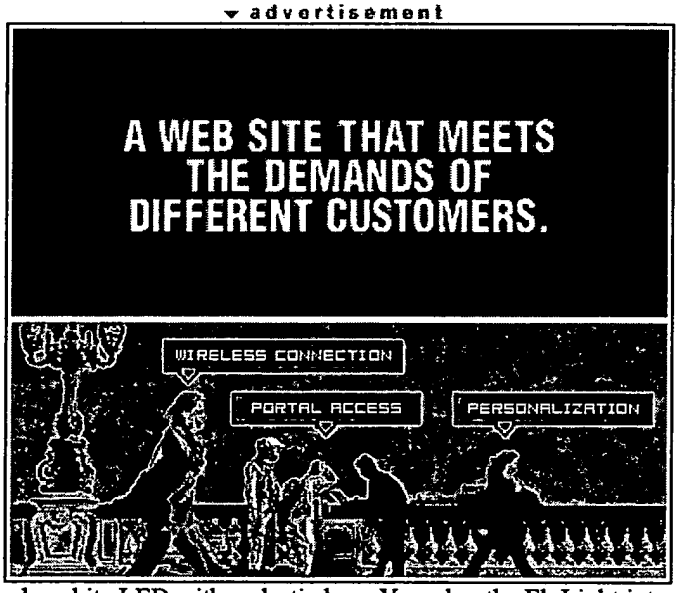
Bill Machrone,
Contributing Editor
PC Magazine
Friday, December 15, 2000

TALK BACK!
Tell us your opinion!

I often use my laptop in the dark. Whether on an overnight flight or responding to Notes' "new mail" tone in the den just after I've turned out the lights, I keep needing to see the keyboard.

I'm a touch typist, but I can't find every special character by touch, and the undifferentiated row of function keys on my Toshiba Portege is a real challenge. Sometimes I tilt the screen down over my hands to find one of those lesser-used keys. Sure, there's an overhead light on the airplane, but it's occasionally burned out; sometimes it casts a distracting glare onto the screen; sometimes I'm considerate of my sleeping fellow passengers.

advertisement



HANDY DEVICE

Enter the FlyLight. This handy little device came into existence because of my review of IBM's Thinkpad A20. I'd mentioned that one of my favorite features of the A20 was the tiny blue-white LEDs built into the upper edge of the screen. A keyboard command turned them on, shining a pale, but useful light onto the keys. Industrial designer Darren Kim read that column and got to thinking that every laptop could use a keyboard light. He designed and built the first FlyLight, then licensed the design to Kensington.

The device is sheer simplicity: a USB connector, a thin gooseneck, and a white LED with a plastic lens. You plug the FlyLight into your USB port and aim the head at your keyboard. The LED draws very little power; Kim estimates a loss of no more than 90 seconds' battery life per hour of laptop life. In my tests, the effect has been negligible.

CASTING UNATTRACTIVE LIGHT

The FlyLight couldn't have existed a year ago, or if it did, it would cast an unattractive yellow or greenish light instead of its silvery blue-white. White LEDs have been one of the goals of LED manufacturers ever since the first ones glowed red and green. But LEDs put out monochromatic light and white is a combination of all the visible wavelengths. Blue LEDs were an innovation that opened up the door to white LEDs.

Some manufacturers attempted to produce multi-chip LEDs with red, green, and blue elements, so that they would combine into a white light. The whiteness of the light wasn't very convincing, wasn't very bright and the triple chips (four, actually, one each red and green, two blue) ate power. Then somebody got the bright idea of coating the blue LED element with a phosphor that emits light over a broad spectrum. And thus the white LED was born.

An incandescent grain-of-wheat bulb typically consumes 40 to 60 milliamps of current. A white LED can produce useful light with as little as 3 ma, and can be painfully bright at 20 ma. If you're inclined to experiment with white LEDs, check out TheLedLight.com. I haven't seen these devices in Radio

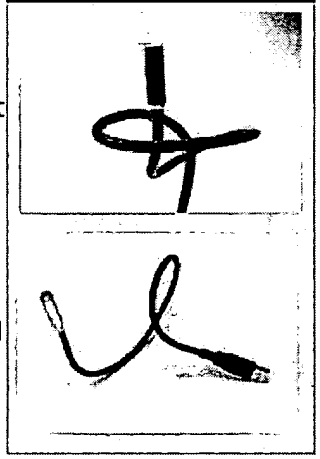
Introduction

PRODUCT PHOTOS



Click for More Photos

The Kensington FlyLight is designed to be a highly portable, easy to use, accessory for you laptop or computer. It has no switches and simply uses a USB port for power. Kensington currently offers three different versions of the FlyLight: The FlyLight Notebook USB Light (reviewed here) with a blue/white LED light and black neck; the Platinum FlyLight with a blue/white LED light and silver neck; and the FlyLight with Red LED with a Red LED and black neck.

Setup

Setup was as easy as removing the package, plugging the FlyLight into the USB port on your computer, and adjusting it into a nice wacky shape (see pictures). There are no drivers or software to install, the USB port simply provides power to illuminate the FlyLight.

Usability

The FlyLight performed exactly as advertised. It provides great illumination for such a small compact light. It was designed for low light situations such as flying, where you might need a little extra light without disturbing your neighbors. The FlyLight also can occupy your time while in transit; it actually is a lot of fun trying to design different functional shapes with the highly bendable neck.

Testing

The FlyLight performed best in near darkness, where the Laptop's LCD display didn't provide enough light for reading papers that were sitting beside the computer. The FlyLight made the papers easy to read and allowed me to do work with no other lights on.

I also used the FlyLight in a lecture hall where the professor turned off the lights for a presentation. In fact the whole class got to see what it was because the professor made a point to ask about it after the presentation was finished. The FlyLight provided more than adequate light for my paper notes as well as helping me see the compact keyboard of my laptop. I asked my neighbors if it bothered them. They actually wished it were brighter so that they could have used some of the light. The FlyLight passed my this test by covering my needs in the dark room, while not disturbing any of my neighbors.

The last location I tested the FlyLight was in a well-lit lecture hall. This room always caused me problems because of the glare from the ceiling lights. The light again helped out. It provided enough light to keep the glare from appearing on the pages of my book.

The Look

The FlyLight LED is a cross between blue and white and is very easy on the eyes (unless pointed directly into them). The light is extremely bright up close and provides just enough illumination when raised above an object to cover an area roughly the size of a standard piece of paper (8 1/2" - 11"). The darker the room, the brighter the light seems to be and the more it will illuminate.

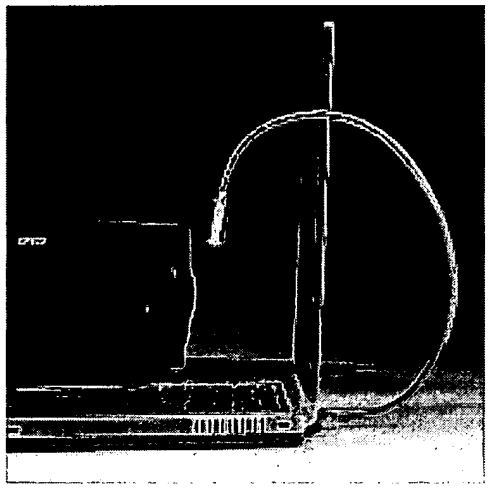
FlyLight™

USB Notebook Light

The FlyLight™ USB Notebook Light is the perfect companion for the executive on the go. The small, flexible light plugs into your portable computer's USB port to provide gentle, long-lasting illumination anywhere—on a plane, in a presentation room, or relaxing in bed. Shed some light on your laptop with the FlyLight.

Plug-n-Glow™ technology

- No external power source necessary—plugs into any USB port
- Uses less than 90 seconds per hour of battery charge
- Soft light illuminates your keyboard but won't disturb others
- Red LED helps preserve night vision (62644)



Work on a plane without disturbing anyone...show slides or illustrations in a darkened conference room...even use it with your desktop computer. The soft, gentle glow of the FlyLight USB Notebook Light provides just enough brightness to illuminate the keyboard.

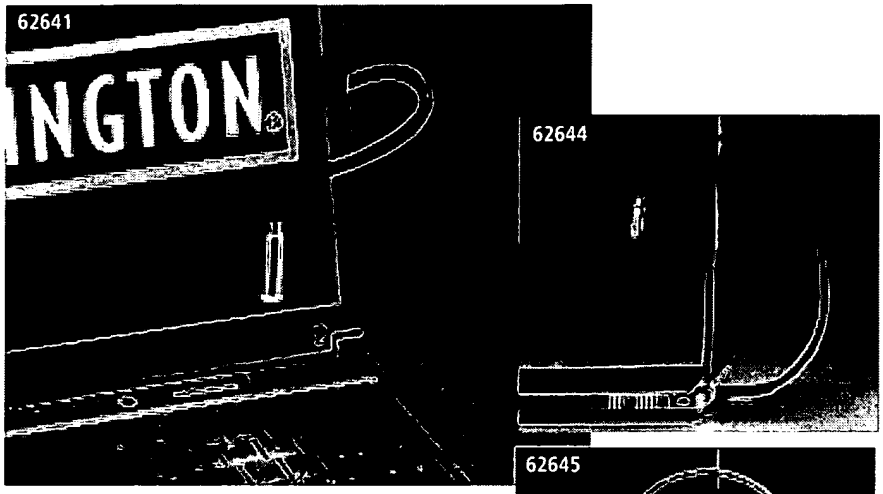
Built to perform

- Flexible neck lets you position FlyLight where you want it
- LED lasts up to 100,000 hours—anywhere, anytime
- No switches—virtually nothing to break
- Sleek, high-tech design in black or platinum color
- Small and lightweight—perfect for the executive on the go
- Fits easily into a briefcase or portfolio

62641 FlyLight USB Notebook Light
62644 FlyLight with Red LED Light
62645 FlyLight Platinum

ACCO BRANDS

Everywhere you go, there's a FlyLight to light your way



When you want to light up your keyboard or documents, choose FlyLight. The original FlyLight (62641) has a soft white LED. The FlyLight with the red LED (62644) helps preserve night vision and has a soft glow. The Platinum FlyLight (62645) features the high-tech look of platinum on the gooseneck and LED cover. All three are small, flexible, and plug into any USB port to give soft light where you most need it.
